

# Calender Page Challenge

VanHackathon 2019

# Solution in Brief

This solution is developed purely in HTML / CSS / JavaScript

Google Cloud Firebase is the Database used in this solution. It is also used for Authentication

This solution demonstrates the experience as DevOps and a high experience of software development

There are various advantages of using native cloud storage while developing for cloud. See here: <https://cloud.google.com › storage › docs › best-practices>

# Application

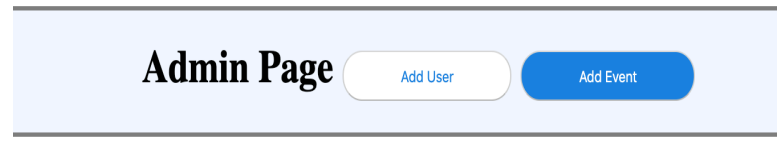

There 2 html pages in this solution

**First page (adding.html) is for admin use only. It serves 2 purposes:**

Adding new Vanhack Events to the database in a user-friendly manner

Migrating the existing Vanhack users (both premium and non-premium users) to this new database

**Second page (index.html) is for the Vanhackers user and this serves the follow aim:**

Display events (upcoming & past)- Webinar (Premium & non-premium), Leaps, Recruiting missions, Q & A Sessions, VanHackathons, Meetups, and others

Current user must Confirm if already registered this particular event

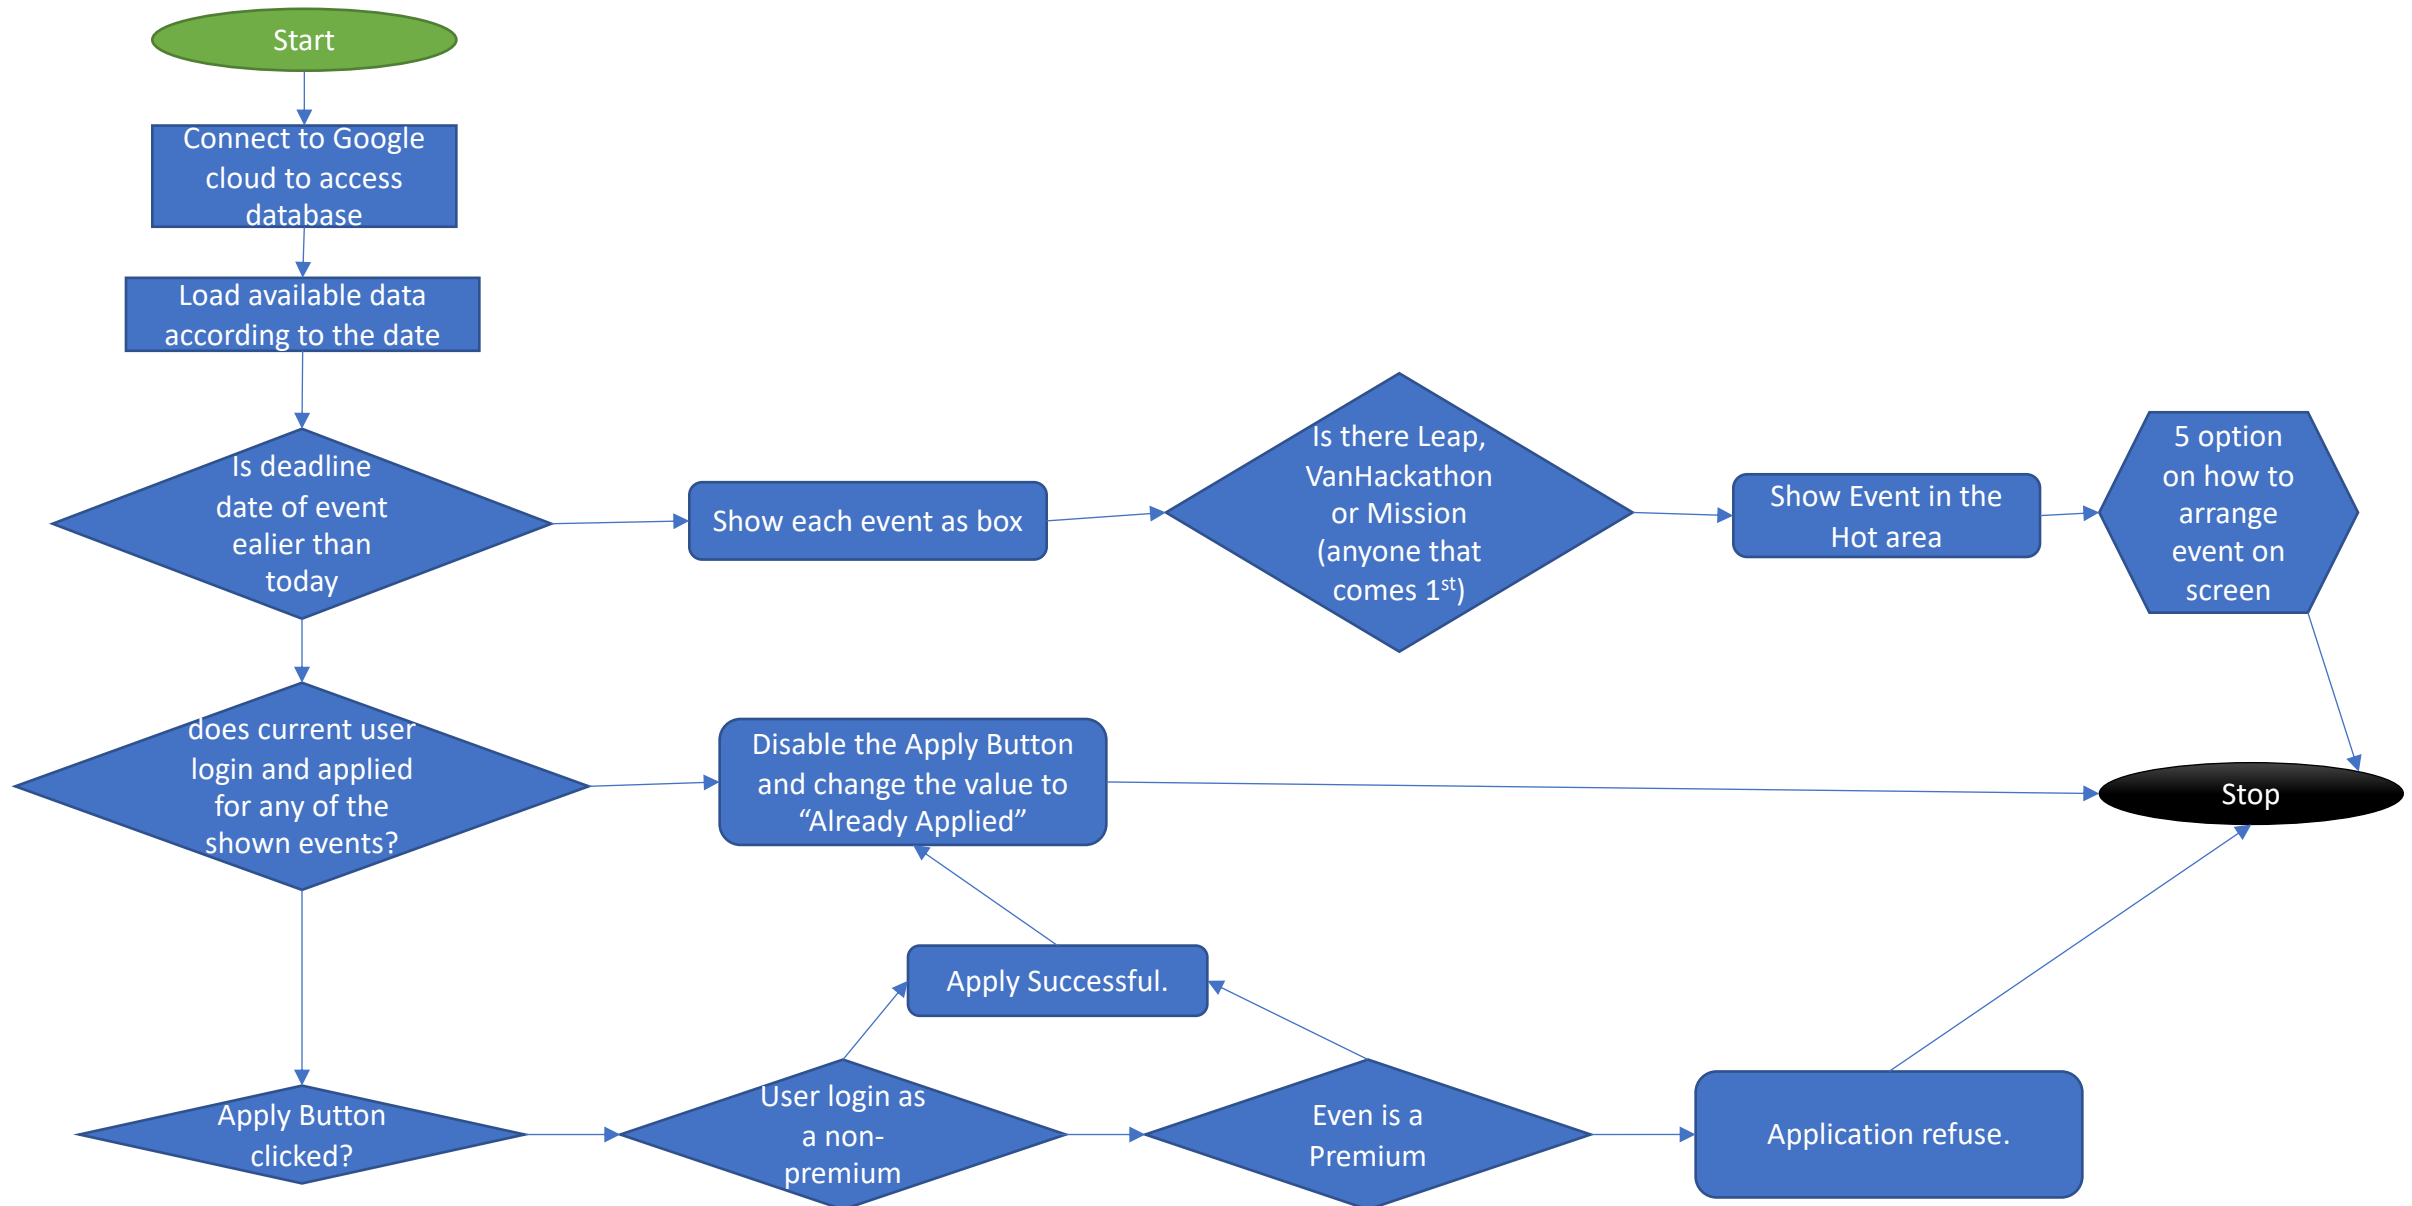

Events can be arranged in desired order

Priority in the list are:

- Leaps
- VanHackathons
- Mission

Webinar for Premium can only be applied for by premium members only

# Application Workflow (index.html)

Thank You!
